1. The disclosure is objected to because of the following informalities: on page 2, line 14, it appears that the word "connected" should be changed to --connecting--.

Appropriate correction is required.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by applicant's admitted prior art Fig. 2.

Instant Fig. 2 shows an auto-clamping circuit responsive to a reset signal PORL for tying an input terminal 31 to a definite voltage potential (i.e., ground voltage), which includes a conductive input line 32 coupled to the input terminal 31, and an electronic switching means (i.e., the combination of elements 33 and 35) coupled between the input line 32 and a voltage supply line (i.e., the ground line), which elements are effective for coupling line 32 to ground whenever the reset signal PORL is asserted (i.e., whenever PORL is low logic level, the gate

voltage of FET 33 will be high logic level and the input line 32 will be pulled down to ground, i.e., 0V.

3. Claim 7 is allowed.

Claims 2-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
